EDUCATION

Rutgers University

Bachelor of Science in Computer Science | GPA: 3.39/4.00

New Brunswick, NJ

May 2026

Honors: Dean's List, Spring 2025 and Fall 2025

Coursework: Data Structures; Design and Analysis of Computer Algorithms; Systems Programming; Software Methodology; Introduction to Artificial Intelligence

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, Java, C, SQL

Frameworks: React, Next.js, Node.js, Express, Flask, Streamlit

Data: PostgreSQL, TimescaleDB, SQLite, MongoDB, Supabase, Pandas, XGBoost

Tools: Git, Docker, Linux, Nginx, Airflow, Kafka/Redpanda, automated testing

EXPERIENCE

Perfumagic / Aromalab

Full Stack Developer Intern

Ecuador

Jul 2026 - Present

- Built and launched a **4-module platform** designed for **about 35 staff** using **Next.js, TypeScript, and Supabase**, centralizing sales, field service, collections, and management workflows from Google Sheets and Apps Script.
- Replaced submit-time duplicate-payment blocking with **live warnings and linked receipts**, preserving entered data and letting staff distinguish legitimate payments before submission.
- Combined **mobile visit reporting** for equipment readings and photo evidence with **PDF generation** for quotations, contracts, and service orders in the same platform.
- Implemented **PostgreSQL row-level security**, role-based permissions, and audit histories to control access and trace payment approvals, reconciliation, and reversals.
- Created a local Apps Script compatibility runner and **automated regression tests** to preserve business rules and access controls during incremental migration.

KMON Ascensores | GitHub

Software Engineering Intern

Ecuador

May 2025 - Aug 2025

- Built a **Python/Streamlit** quotation tool with **docxtpl** Word generation, cutting preparation time from **90 to 10 minutes**.
- Designed **100+ Excel-configured parts rules** with safely evaluated expressions and motor-selection logic, reducing configuration errors by **60%**.
- Automated Excel-to-database updates with **Pandas and SQLAlchemy (SQLite/PostgreSQL)**, reducing price-update turnaround from **2 days to 1 hour**.

PROJECTS

Real-Time CRM Churn Risk Pipeline | GitHub

Jul 2025

- Built a streaming and batch pipeline for **7-day churn prediction** using **TimescaleDB, MongoDB, and Redpanda/Kafka**; scheduled daily feature refreshes with **Airflow**.
- Trained an **XGBoost** model with **0.90 ROC-AUC** and SHAP explanations; exposed predictions through a **Flask API** and containerized services with **Docker Compose**.

CR-Decksmith: Clash Royale Deck Analyzer | GitHub

Apr 2025

- Built an **Express/TypeScript API** and **Next.js** interface to analyze 8-card decks from official battle logs and rank recommendations using **logistic regression** with a heuristic fallback.
- Generated card-role and cost mappings from the official cards API and **RoyaleAPI** data, including evolutions and champion tagging.

ProfessorRank | GitHub

May 2024

- Built and deployed a **Next.js, React, and TypeScript** professor-rating platform serving **50 users** in Ecuador.
- Designed a **PostgreSQL/Prisma** schema, validated **REST endpoints**, and search across professors, courses, and schools; implemented **Google OAuth** and role-based access with **NextAuth**.
